

By Indication Offered

Information below is a detailed view of services that were requested prior authorizations with approval and denial rates by specific service code or APS group. For each service identified below, a diagnosis description is listed. A diagnosis is the identification of the nature of an illness or other problem by examination of the symptoms. Molina authorization data includes APS in the service code data field. APS is a bundle of same or similar codes. We authorize services in groups for certain procedures and for hospital stays. This is done to reduce provider administrative burden to match claim exactly to single code authorizations. APS service code groups allow us to pay the claim when the claim is billed within the APS group range instead of the specific code. Please refer to [Pre-Authorization Statistic Abbreviation Guide](#) to view the descriptions of the APS abbreviations.
