

Did you know . . .

Approximately 50% of patients do not take their medications as prescribed?

Molina's MTM department can help with medication non-adherence by identifying barriers and coaching patients to take their medications.

Adherence is lowest among patients with chronic disease.

A 90-day supply can improve adherence up to **15%** and can help save your patient money!

Poor adherence leads to morbidity, premature death, and high costs!

We can work with you to help facilitate:

Molina's MTM Department provides clinical pharmacy resources to your Medicare and MMP patients.

Clinical pharmacists are available to review your patient's medications, improve drug knowledge, and identify and resolve barriers to adherence.
