

## Understanding Dementia: Impacts on Diverse and Inclusive Populations

ALZHEIMER'S ASSOCIATION

1

### Disclosure of Financial Relationships

We do not have any relevant financial relationships with any commercial interests related to this talk

(Bruno's kids have all his money anyway. Ditto for Kate).

ALZHEIMER'S ASSOCIATION

2

## Vision: A world without Alzheimer's and all other dementia®.

ALZHEIMER'S ASSOCIATION

3

### Mission:

The Alzheimer's Association leads the way to **end Alzheimer's and all other dementia** — by accelerating global research, driving risk reduction and early detection, and maximizing quality care and support.

ALZHEIMER'S ASSOCIATION

4

### Strategic goals

- Providing and enhancing care and support.
- Accelerating research.
- Increasing concern and awareness.
- Strengthening diversity, equity and inclusion.
- Advancing public policy.
- Increasing revenue.

ALZHEIMER'S ASSOCIATION

5

### Local Care and Support

- 24/7 Helpline 1.800.272.3900
- Support Groups
- Education Programs
- Care Counseling
- Social Engagement
- Early Stage Programming
- Clinical Trial Matching Service
- Online Resource Finder and Message Boards
- Respite Scholarships

ALZHEIMER'S ASSOCIATION

6

### Local Commitment to Diverse Communities

- 24/7 Helpline available in over 200 + languages
- Programs translated into Arabic and Spanish
- Dedicated programming and outreach managers to:
  - Black/African Americans
  - Hispanic and Latino/Latina Americans
  - Middle Eastern North African Americans
  - Jewish Americans
  - People Living with HIV
  - LBGTQ+
  - People with Intellectual/Developmental Disabilities
  - Veterans

ALZHEIMER'S ASSOCIATION

7

# Dementia Facts

ALZHEIMER'S ASSOCIATION

8

### TYPES OF DEMENTIA

Dementia is an umbrella term for loss of memory and other thinking abilities severe enough to interfere with daily life.

- Alzheimer's
- Vascular
- Lewy body
- Frontotemporal
- Other, including Huntington's
- \* Mixed dementia: Dementia from more than one cause

ALZHEIMER'S ASSOCIATION

9

More than **7 million** Americans are living with Alzheimer's.

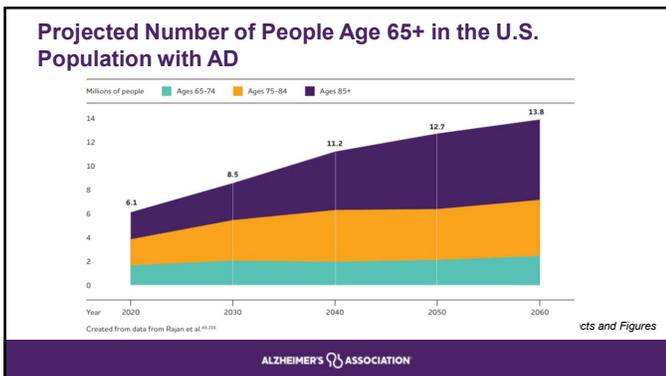

By 2050, this number is expected to rise to nearly **13 million**.

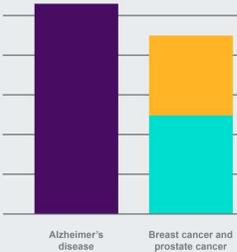

ALZHEIMER'S ASSOCIATION

10

11

**Alzheimer's** kills more people than **breast cancer** and **prostate cancer** combined.

ALZHEIMER'S ASSOCIATION

12

**1 in 3** seniors dies with **Alzheimer's** or another dementia.

ALZHEIMER'S ASSOCIATION

13

Between 2000-2021, deaths from **heart disease** have **decreased 2.1%** while deaths from **Alzheimer's disease** have **increased 141%**.

ALZHEIMER'S ASSOCIATION

14

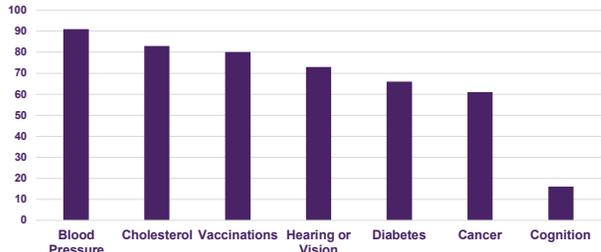

**55%** of primary care physicians say there are not enough dementia care specialists in their communities to meet patient demand.

ALZHEIMER'S ASSOCIATION

15

**Rate of Screenings at Medicare Annual Wellness Visit**

Screening Category	Rate (%)
Blood Pressure	90
Cholesterol	80
Vaccinations	78
Hearing or Vision	70
Diabetes	65
Cancer	60
Cognition	15

ALZHEIMER'S ASSOCIATION

16

**Who Should be Evaluated For Cognitive Impairment?**

**Per the Alzheimer's Association:**

- Individuals with memory concerns or other cognitive complaints.
  - Non-memory triggers include personality change, depression, deterioration of chronic disease without explanation, and falls or balance issues
- Informant reports of cognitive impairment, with or without patient concurrence
- Medicare beneficiaries, as part of the Annual Wellness Visit

**Per the US Preventative Services Task Force 2014 Recommendations:**

- "For asymptomatic, community-dwelling adults 65 years and older. There is insufficient evidence to recommend for or against screening for cognitive impairment. Clinicians should remain alert to early signs or symptoms of cognitive impairment (e.g., problems with memory or language) and evaluate as appropriate."

ALZHEIMER'S ASSOCIATION

17

**Cognitive Testing is Just One Piece of the Puzzle**

- Routine medical history and physical examinations is insufficient
- Cognitive testing is important particularly for older adults with cognitive concerns
- Impaired score must be taken in context of the clinical history and collateral information
  - Ceiling effects for younger and highly educated patients
  - Test characteristics (sensitivity and specificity) are less well defined for non-Alzheimer's etiologies
  - Possibility of false-positive results (less education, different cultural backgrounds, or tested in non-native language)

ALZHEIMER'S ASSOCIATION

18

### Brain Imaging: PIB Scanning, Identifying the Earliest Signs

Researchers have developed compounds (PIB) that bind to amyloid and allow plaques to be "seen" with brain imaging

ALZHEIMER'S ASSOCIATION

25

### Tau lesions and senile plaques in Alzheimer's disease

Hippocampal formation (arrowheads)

26

Healthy brain | Alzheimer's brain

The cortex shrivels up, damaging areas involved in thinking, planning and remembering.

Ventricles (fluid-filled spaces within the brain) grow larger.

Shrinkage is especially severe in the Hippocampus, an area of the cortex that plays a key role in formation of new memories.

ALZHEIMER'S ASSOCIATION

27

### Alzheimer's Disease is a Continuum

Asymptomatic	MCI due to Alzheimer's disease	Dementia due to Alzheimer's disease		
		Mild	Moderate	Severe
No cognitive symptoms but possible biological changes in the brain	Early stage of cognitive ability loss	Typically involves symptoms that interfere with some daily activities	More pronounced symptoms that interfere with many daily activities	Symptoms interfere with most daily activities

MCI

- Over 5 years, ~50% will transition to dementia.
- Less than 10% will improve.
- ~40% will remain stable.

ALZHEIMER'S ASSOCIATION

28

### Risks for Dementia Include

<p><b>Strongest Risk Factors</b></p> <ul style="list-style-type: none"> <li>Age</li> <li>Down Syndrome</li> <li>Genetic influences</li> <li>Heart Disease</li> <li>Metabolic Syndrome</li> <li>Diabetes</li> <li>Chronic medical illness</li> <li>Smoking</li> <li>Sleep problems</li> <li>Black/Latinx race/ethnicity</li> <li>Alcohol Abuse</li> <li>Depression/Anxiety</li> </ul>	<p><b>Weaker Risk Factors</b></p> <ul style="list-style-type: none"> <li>Female gender</li> <li>History of head injury</li> <li>Lower level of education</li> <li>Low activity level (cognitive, social, and physical)</li> <li>Stress</li> </ul>
--	---

Which ones can we affect?

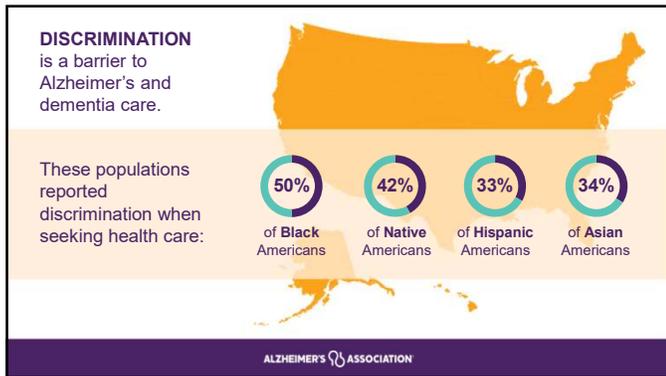

ALZHEIMER'S ASSOCIATION

29

## General Facts on Diverse Populations

ALZHEIMER'S ASSOCIATION

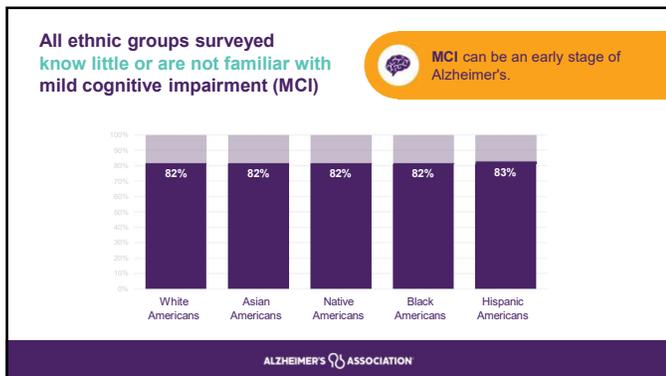

30

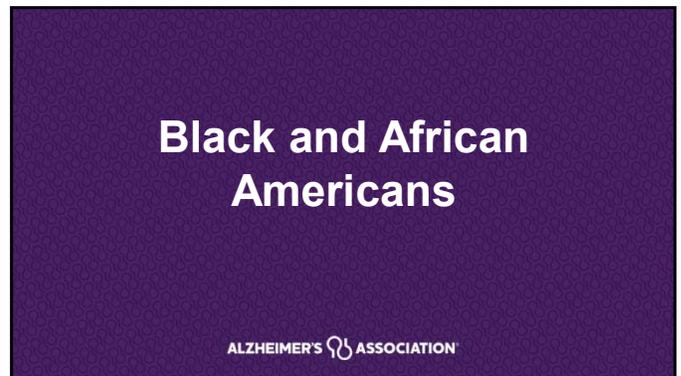

31

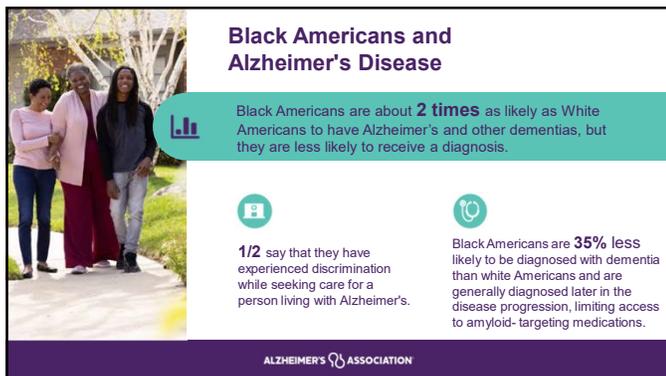

32

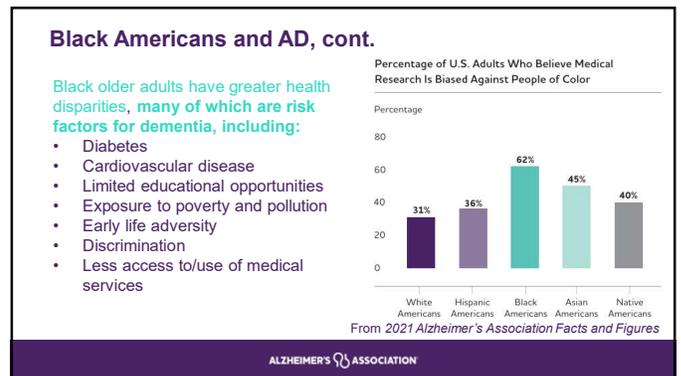

33

34

35

36

# Hispanic and Latino/Latina Americans

ALZHEIMER'S ASSOCIATION

37

## Hispanic Americans and Alzheimer's Disease

Hispanic Americans are about **1.5 times** as likely as White Americans to have Alzheimer's and other dementias.

- 57%** believe that a significant loss of memory or cognitive abilities is a "normal part of aging."
- 1 in 3** report that they have experienced discrimination when seeking health care.

ALZHEIMER'S ASSOCIATION

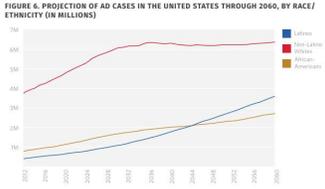

38

## Hispanic Americans and AD, cont.

Hispanic older adults have greater health disparities, many of which are risk factors for dementia, including:

- Diabetes
- Cardiovascular disease
- Lower income and educational attainment
- Less access to/use of medical services

**FIGURE 6. PROJECTION OF AD CASES IN THE UNITED STATES THROUGH 2040, BY RACE/ETHNICITY (IN MILLIONS)**

From *Latinos & Alzheimer's Disease: New Numbers Behind the Crisis*, 2016

ALZHEIMER'S ASSOCIATION

39

# Middle Eastern/North African (MENA) Americans

ALZHEIMER'S ASSOCIATION

40

## MENA Americans and Alzheimer's Disease

Compared to other ethnic groups, MENA populations are often underrepresented in dementia research, making it difficult to accurately assess the prevalence and risk factors within this community.

- The Arabic word for dementia, "**alkharaf**", can be considered derogatory, further hindering individuals from seeking help.
- Some studies indicate that foreign-born MENA women may have a significantly higher rate of undiagnosed dementia compared to MENA men

ALZHEIMER'S ASSOCIATION

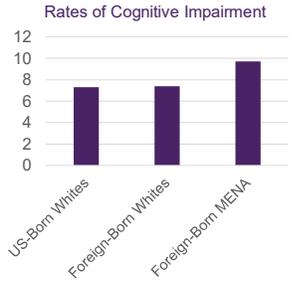

41

## MENA American and AD

MENA older adults have greater health disparities, many of which are risk factors for dementia, including:

- Diabetes
- Cardiovascular disease
- Depression (with cultural stigma surrounding mental health treatment)
- Lower income and educational attainment
- Less access to/use of medical services

**Rates of Cognitive Impairment**

Dallo, F. J., Kindratt, T. B., & Zahodne, L. (2021). *Innovation in aging*.

ALZHEIMER'S ASSOCIATION

42

43

### Jewish Americans and Alzheimer's Disease

The risk of developing dementia is higher for Jewish Americans due to genetic factors, especially for those with Ashkenazi Jewish Ancestry.

- Brain icon:** Non-Ashkenazi Jews are more likely to develop Early Onset Dementia (before age 65) than non-Jews.
- Target icon:** Holocaust survivors are **21%** more likely to develop dementia than non-survivors.

ALZHEIMER'S ASSOCIATION

44

### Jewish Older Adults and AD and LBD

People of Ashkenazi Jewish descent are at a higher risk of developing certain types of dementia, including **Alzheimer's disease and dementia with Lewy bodies (DLB)**, due to a number of factors, including:

- Genetic risk factors, including APOE and GBA, among others.
- Genetic isolation

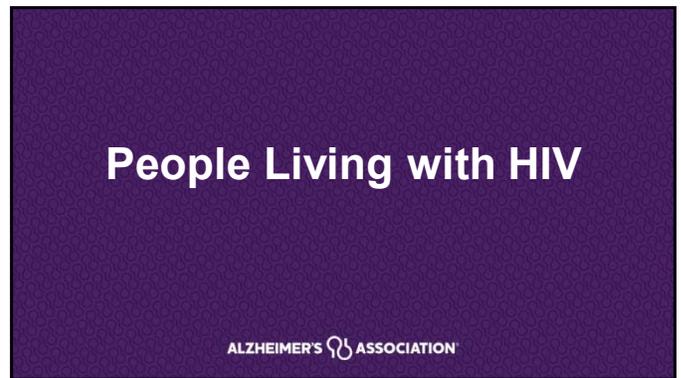

Holocaust exposure and late-life cognitive performance in men with coronary heart disease

Assessment	Concentration camp or ghettos survivors	Holocaust survivors who escaped concentration camps/ghettos	Not exposed to the Holocaust
1st	~95	~95	~95
2nd	~80	~92	~95

(Weinstein et al., 2020)

ALZHEIMER'S ASSOCIATION

45

46

### People Living with HIV and Alzheimer's Disease and HAND

People living with HIV are 5x more likely to experience cognitive decline than those without HIV

- Brain icon:** 60% of people living with HIV over the age of 50 and/or living with HIV 15+ years experience memory loss....
- Target icon:** ...but 36% have NOT discussed this issue with a medical provider.

ALZHEIMER'S ASSOCIATION

47

### Clinical Features of HIV Associated Neurocognitive Disorder (HAND)

- Cognition:** Impairments in Attention/Processing Speed, Working Memory, Executive Functioning
- Behavior:** Apathy, Depression, Anxiety, Agitation, Mania, Sleep Disturbance
- Motor:** Unsteady Gait, Poor coordination, Tremor

**Unlike MCI/ADRD:**

- Efficiency in learning and retrieval are reduced, but primary memory disturbances are rare
- Motor symptoms often present

ALZHEIMER'S ASSOCIATION

48

### People Living with HIV and AD/HAND

People Living with HIV have higher rates of many of the co-morbidities which are risk factors for dementia, including:

- Diabetes
- Cardiovascular disease
- Depression and chronic stress
- Substance use disorders
- Greater number of chronic health conditions

ALZHEIMER'S ASSOCIATION

49

### Risk Factors for HAND

- Age
- Low lowest CD4 count
- Low current CD4 count
- Poorly controlled viral load
- High blood pressure
- Diabetes
- Substance use disorders
- High cholesterol
- Hepatitis C

Modified from Ellis et al., 2007 & Grant et al., 2009

ALZHEIMER'S ASSOCIATION

50

# People who Are LGBTQ+

ALZHEIMER'S ASSOCIATION

51

### LGBTQ+ Americans and Alzheimer's Disease

LGBTQ+ individuals are **29%** more likely to report subjective cognitive decline (a possible precursor to dementia) than their cisgender, heterosexual counterparts.

- Up to **30%** delay medical care due to fear of discrimination
- 40%** report that their support networks have become smaller over time.

ALZHEIMER'S ASSOCIATION

52

### LGBTQ+ Americans and AD

LGBTQ+ older adults have higher rates of many of the co-morbidities which are risk factors for dementia, including:

- Depression
- Obesity
- Alcohol and tobacco use
- Fewer preventative screenings
- Cardiovascular disease
- HIV

Source: Neurology - Get the Data - Created with Datawrapper

ALZHEIMER'S ASSOCIATION

53

# People with Intellectual/Developmental Disabilities

ALZHEIMER'S ASSOCIATION

54

### People with Intellectual/Developmental Disabilities and Alzheimer's Disease

More than 50% of people with Down syndrome will develop Alzheimer's and individuals with other intellectual and developmental disabilities may be at increased risk for dementia as well.

- People with Down Syndrome not only have a higher risk of AD, they also develop it much younger and progression is generally quicker than in those without DS.
- Diagnosing dementia in this population is complicated by the fact that no formal neuropsychological testing has been normed in those with I/DD.

ALZHEIMER'S ASSOCIATION

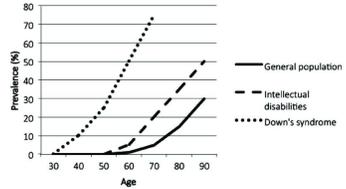

55

### Individuals with I/DD and AD

Older adults with I/DDs have higher rates of many of the co-morbidities which are risk factors for dementia, including:

- Diabetes
- Heart disease
- Sleep Disorders
- Epilepsy
- Depression/anxiety
- Low activity level
- Lower educational attainment

Comparison of dementia prevalence rates by age

ALZHEIMER'S ASSOCIATION

56

# Veterans

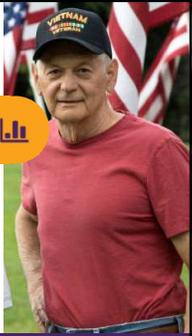

ALZHEIMER'S ASSOCIATION

57

### Veterans and Alzheimer's Disease

Veterans are at higher risk of developing dementia than non-veterans

- A recent meta-analysis estimates the increase in dementia risk from any form of TBI was **70%**
- Veterans with PTSD have almost **double** the dementia risk of veterans without PTSD.

ALZHEIMER'S ASSOCIATION

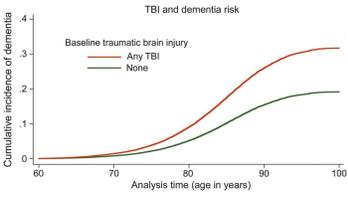

58

### Veterans and AD

Veterans have higher rates of many of the co-morbidities which are risk factors for dementia, including:

- Heart disease
- Depression
- High Cholesterol
- PTSD
- Traumatic Brain Injury
- Exposure to Agent Orange
